SetPropertyDetails for Direct Connect ARI Chain Partners:

While the Property API documentation is relevant to both our Expedia Quick Connect (EQC) and Direct Connect (ARI) partners, there is a minor difference to the Onboarding Request if you are a Direct Connect ARI Partner. You will need to include the **Brand Code** and **Chain Code** to the Onboarding Request to Complete Successful Onboarding. **Both Brand Code and Chain Code accept *String* values.**

The below example is a request to onboard a new property using SetPropertyDetails for Direct Connect ARI Partners. We have highlighted the section in the sample.

Example SetPropertyDetails Request:

```
[{
    "providerPropertyId": "1289472",
